

Durable AI — Business Plan 2026

Institutional-grade AI crypto investment platform

Durable AI Ltd.

2026 – 2027

1. Executive Summary

Durable AI is a next-generation crypto investment platform that combines deep-learning trading models with institutional-grade custody. Founded in 2023, we serve more than 120,000 active investors across 180+ countries, settling all profits in USDT. Our mission is to democratize the algorithmic trading edge that has historically been reserved for hedge funds.

2. The Opportunity

Daily spot and derivatives volume across major exchanges now exceeds USD 150 billion. Retail investors continue to underperform the market while institutions deploy automated systems. Durable AI closes this gap by giving every user access to 84 live strategies, retrained weekly on real exchange order-book data.

3. Product Offering

Investors fund their account in USDT (BEP-20), choose an investment plan (Starter, Pro, or Elite), and receive daily profits credited automatically. Withdrawals are processed within 24 hours. A lifetime referral program rewards users with up to 10% commission across three levels.

4. Investment Plans

Starter — minimum 50 USDT, 1.2% daily for 30 days. Pro — minimum 1,000 USDT, 1.8% daily for 45 days, including priority signals and a dedicated manager. Elite — minimum 10,000 USDT, 2.5% daily for 60 days, institutional strategies and a personal analyst.

5. Technology

Our trading desk monitors order books, on-chain data, and sentiment across 12 exchanges. Models are continuously retrained on more than 4 TB of market data per week. Funds are protected by cold-storage custody, SOC-2 controls, and on-chain proof of reserves.

6. Revenue Model

Durable AI earns a small performance fee only when investors profit. Additional revenue is generated by spreads on internal liquidity routing and partnerships with custody providers.

7. Risk Management

All strategies operate inside hard drawdown limits. Position sizing is dynamic and stop-loss logic is enforced at the execution layer. Reserve capital is segregated from active trading.

8. Roadmap 2026 – 2027

Q3 2026: launch of mobile applications (iOS / Android). Q4 2026: institutional API and OTC desk. Q1 2027: regulated entity in the EU. Q2 2027: launch of Durable AI native token and staking program.
